PROFESSIONAL SUMMARY

Frontend Developer with 7 years of experience who has been the sole frontend engineer on 20+ commercial projects — architecting, building, and shipping React, Next.js, and TypeScript applications from Figma to production while working with project managers, backend developers, and designers. 5+ years making the architecture, performance, and accessibility calls end-to-end across e-commerce, corporate, and web-app builds, consistently driving measurable gains in conversion, load time, and user engagement. Also builds full-stack Next.js applications (Supabase, Auth.js, Stripe) with automated tests and CI/CD, shown in three personal projects.

TECHNICAL SKILLS

Frontend: React (React.js), Next.js, TypeScript, JavaScript (ES6+), HTML5, CSS3, SCSS, CSS Modules, Tailwind CSS

State & Data: Redux Toolkit, TanStack Query (React Query), REST API, Axios

UI & Forms: React Hook Form, Zod, Radix UI, shadcn/ui, Ant Design, Bootstrap

Next.js & Backend: Next.js App Router, Server Components, Server Actions, Next.js API Routes, SSR (Server-Side Rendering), Prisma, PostgreSQL, Supabase (PostgreSQL, Storage), Auth.js (NextAuth.js), Stripe (Checkout, Webhooks, Refunds)

Testing & CI/CD: Vitest, Jest, Unit Testing, React Testing Library, GitHub Actions, Vercel (Deployment Checks)

Accessibility & SEO: WCAG, ARIA, Semantic HTML, Technical SEO, Schema.org

Tools & Workflow: Git, Docker, GitHub, VS Code, npm, ESLint, Prettier, Claude Code (AI-assisted development)

Languages: Azerbaijani (Native), Russian (Native), English (B1; reads and writes technical documentation confidently)

PROFESSIONAL EXPERIENCE

Frontend Developer | Oweb Solutions | February 2020 – March 2025

Sole Frontend Developer on 20+ projects (most under NDA): e-commerce, corporate sites, and web apps, working with project managers, backend developers, and designers. Owned frontend architecture, responsive behavior, API integration with the backend team, and technical decisions from Figma to production. Improved accessibility with semantic HTML/ARIA, mentored an intern, and advised designers on technical constraints and reusable components. Worked within a team Git flow (feature branches, pull requests, code review by a senior developer) and PM-planned sprints with fixed deadlines.

- Rozetki.su — raised Google PageSpeed **from 57 to 92** (Desktop) via CSS/JS/HTML optimization and lazy loading; rebuilt the outlet configurator in React with dynamic product variants; implemented technical SEO (semantic HTML, metadata, breadcrumbs, Schema.org).
- KrymKing — redesigned the rental platform: form/date-picker UX (**~12% bookings on average, ~30% booking completion time**), custom Yandex Maps integration with interactive property markers (client team highlighted the improved clarity and usability), Fancybox galleries, responsive down to 320px.
- Cryomont — built from scratch as a flagship brand site: custom full-page scrolling in vanilla JS (mouse/keyboard/touch), custom sliders built on the Swiper API, UI animations, interactive SVG map of Russia with region/city tooltips; client was highly impressed with the design, functionality, and animations.
- AKmarket40 — e-commerce site from scratch with a custom drag-and-drop product comparison interface; site traffic and average time-on-site grew **~20%** following launch (per Yandex Metrica analytics).
- AltoCar — taxi marketplace with React components for subscriptions, discount-day management, and points tracking/redemption; the new points/discount UI cut related support inquiries by **~32%** (per support team data) and made the app noticeably more intuitive, drawing in more users; cross-browser and mobile support.

Stack: React • JavaScript • jQuery • HTML5 • CSS3 • SCSS • CSS Modules • REST API • Axios • Redux • Swiper API • Fancybox • Yandex Maps API • Technical SEO • Schema.org • Git

Career Break | March 2025 – December 2025

Frontend Developer (Freelance) | January 2018 – February 2020

Mainly HTML/CSS and JavaScript/jQuery; occasional React/TypeScript projects continued alongside Oweb Solutions.

- Built responsive user interfaces for commercial web and mobile projects with HTML5, CSS3, JavaScript, jQuery, React, and TypeScript.
- Developed nearest-car search using the Yandex Maps API.
- Integrated the client side with REST APIs and worked with backend developers on data exchange.
- Maintained and extended existing projects: fixed bugs, shipped new features, and improved user experience.

PERSONAL PROJECTS

BookNest — Fullstack Bookstore with Stripe Payments, Tests & CI/CD | July 2026 – September 2026
Live: murad-booknest.vercel.app | Code: github.com/murad-proger/booknest

Production-like online bookstore (storefront and admin panel, user/admin roles via Auth.js) built around a complete Stripe payment lifecycle in test mode: Checkout, payment retry, admin refunds, and signature-verified idempotent webhooks with race-condition protection. Covered by **24 unit and component tests** (Vitest, React Testing Library); a GitHub Actions CI pipeline with Vercel Deployment Checks blocks production releases until tests pass. Supabase PostgreSQL and Storage; light/dark UI on design tokens with a reusable component kit. Development workflow included Claude Code (AI-assisted coding) for scaffolding and refactoring.

Stack: Next.js 16 • React 19 • TypeScript • Prisma 7 • PostgreSQL • Supabase • Auth.js • Stripe • TanStack Query • Redux Toolkit • React Hook Form • Zod • Radix UI • CSS Modules • Vitest • React Testing Library • GitHub Actions • Vercel • Docker Compose

Used Cars Marketplace | January – March 2026
Live: used-cars-next.vercel.app | Code: github.com/murad-proger/car-marketplace-fullstack

Full-stack car marketplace on Next.js App Router: authentication with role-based server-side authorization, admin CRUD, favorites, and a server-side cart with quantity management, checkout, and order confirmation. URL-based catalog filtering/sorting with shareable links and state that persists across navigation and reload.

Stack: Next.js • React • TypeScript • Supabase • PostgreSQL • Auth.js • Tailwind CSS

Car Marketplace UI System | March – April 2026
Live: murad-proger.github.io/car-marketplace-frontend | Code: github.com/murad-proger/car-marketplace-frontend

React/TypeScript frontend with reusable UI components and modular Redux Toolkit state (catalog, filters, cart, favorites, orders; cart, favorites, checkout, and order history persisted in LocalStorage). Catalog filtering/sorting by price, year, engine displacement, brand, and body type via Mokky API parameters; async data fetching with Axios and createAsyncThunk.

Stack: React • TypeScript • Redux Toolkit • React Router • REST API • Axios • Vite

EDUCATION

Specialist Degree in Finance and Credit, Kaliningrad State Technical University (2010–2016)
